### Company

Geotomographie GmbH (Germany) was founded 2006 by joining two companies, Geo-Messtechnik a leading geophysical equipment manufacturer and Geotomographie a consulting company.

A skilled team of experienced geophysicists, civil engineers and technicians offering quality work world-wide.

Our head office is located in Neuwied, close to Frankfurt.

The manufacturing place is situated in Bad Salzdetfurth near Hannover.

### Equipment Design

Geotomographie GmbH is manufacturing crosshole tomography equipment such as high-frequency borehole seismic sources and borehole receivers, i.e. hydrophone strings and borehole geophones.

A new manufacturing place was established with more than 110 sqm testing and manufacturing facilities and a 180 sqm storage facility.

Customers are world-wide, i.e. in Europe, India, Pakistan, Iran, China, Korea and other countries.

### Consulting

Our company offers specialised geophysical surveys world-wide.

Based on our experience in manufacturing equipment field work effectively supports us to further develop new tools.

Innovative methods like tomography, crosshole testing for foundation design and 3D-MASW surveys are offered.

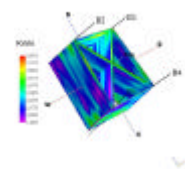

Our work effectively support engineers designing challenging constructions like tall buildings as the Burj Tower in Dubai or on the magnificent Palm Islands.

### Software and Rental

Geotomographie GmbH provides a rental pool of seismic equipment. Seismic borehole sources as well as receivers are available on request.

Further, together with research scientists we are developing software for 1D, 2D and 3D resistivity imaging.
